>> Portofolio for Recent Works

Data Analyst with 12+ years of experience in accounting and tax reporting — now leveraging that deep financial background to build reliable, decision-ready data products. Currently working at Evermos, where I focus on creating a trusted SSOT for finance operations. I design and automate data pipelines using tools like Airflow and transform business requirements into scalable models using SQL, dbt and Python, while also utilizing AI models. I also help enforce data standards and conventions to ensure our datasets remain clean, consistent, and reliable. My years as an accountant taught me how businesses think — and now I translate those needs into data solutions that actually work for stakeholders. Passionate about connecting the dots between raw data and real business impact, and always looking to grow as a modern data professional.

Skill Highlights

- Microsoft Excel, Spreadsheet
- SQL
- Python
- Metabase
- Looker
- Tableau
- Generative AI
- Business Data Analysis
- Financial Reporting & Analysis
